A task is a many-times work item. For example a carpenter may have a task setup as *RUBBISH CLEANUP*. This task is performed multiple times on different worksites. *Tasks* are different to *Activities* in GPS location can be stamped with each In/Out given the following:

1. GPS feature is turned on within TIMEDOCK.
2. An accurate GPS signal can be found.
3. The phone or device is GPS enabled.

If the device supports GPS but the setting is off, and TIMEDOCK is set to collect GPS location, then employees will not be able to clock In/Out until they enable GPS on their phone.

GPS location is only collected if TIMEDOCK has been set specifically to collect this information AND at the point of In/Out. GPS is NOT collected at any other time period (for privacy reasons).

Note: For enabling GPS-stamping refer to [TIMEDOCK: GPS Overview](#).

Note: For reviewing GPS data refer to [TIMEDOCK: Reviewing GPS](#).
